

The proportion of wind power station power generation in my country

Overview

The values are presented in tables and charts with calculations of changes and shares, and with extensive analytical functionality. China is the largest producer of wind power in the world, having generated 466. [2] Since 2010, more than half of all new wind power was added outside the traditional. This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. You can find more about Ember's methodology in this document. This is the citation of the original data obtained from the source, prior to any processing or adaptation by Our. The full report as of 23 April 2025 can be downloaded here as PDF file Bonn (WWEA) - In 2024, new wind turbine installations fell far short of expectations, reaching 121'305 Megawatt, slightly less than in 2023, when 121'465 MW were installed. The International Renewable Energy Agency (IRENA) produces comprehensive, reliable datasets on renewable energy capacity and use worldwide. The indicator is available from 2000 to 2023.

The proportion of wind power station power generation in my country

Wind Power by Country 2026

The United States is the second-largest producer of wind power, and generated 341.40 TWh of wind power in 2021, equal to just over 21% of total global production. Together, China and the United ...

Wind electricity capacity, percent by country, around the world

Wind electricity capacity, percent, 2023: The average for 2023 based on 189 countries was 5.31 percent. The highest value was in Ireland: 40.32 percent and the lowest value was in Albania: 0 percent. The ...

Wind power generation. Data by Countries from 1978 to 2023

Official statistics by year of wind power generation (TWh). The values are presented in tables and charts with calculations of changes and shares, and with extensive analytical functionality.

Wind & Solar Share in Electricity

Production Data , Enerdata

Weight of solar and wind in electricity production data. Data for solar and wind renewable energies in electricity production available in a map and excel file by country level.

Renewable energy statistics 2025

The previous editions and complete electricity generation and capacity dataset from 2000 onwards are available for download on the Data and Statistics web pages.

Wind power by country

Wind power is used on a commercial basis in more than half of all the ...

Wind power by country explained

Wind power is used on a commercial basis in more than half of all the countries of the world. [1] Denmark produced 58% of its electricity from wind in 2023, a larger share than any other

country.

Global Statistics

The world's installed wind power capacity now meets well over 10% of global electricity demand - and much more than nuclear power. More than 30 countries now have a share of wind ...

Share of electricity production from wind, 2025

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this ...
