

The simplest method to fix photovoltaic panels

Nominal Capacity

280Ah

Nominal Energy

50kW/100kWh

IP Grade

IP54

Overview

The repair involves thoroughly cleaning the cracked area with isopropyl alcohol and then applying the resin or sealant, ensuring it penetrates and fills the entire fissure. Before attempting any inspection or repair, it is absolutely necessary to de-energize the system completely. This involves locating the main solar disconnect switch—usually near the inverter or meter—and switching it off, then disconnecting the array from any battery storage to isolate the panels. We'll break down the simple repairs you can confidently tackle on your own and identify the complex problems that require an expert's touch, ensuring you know exactly how to fix broken solar panels without risking your safety or your system's warranty. We'll explore common issues, the tools you'll need, safety precautions, and step-by-step solutions. You'll also learn when to seek professional help to safeguard your system's efficiency and value. This way, you can enjoy the benefits of going solar much longer. That said, it's important to know when to fix solar.
