

Transformer breaker in China in Ireland

Overview

At ENX Engineering, as a leading MEP consultancy in Ireland, we can already report experiencing firsthand the challenges posed by this shortage. Delays in obtaining ESB transformers are impacting project timelines, affecting testing, commissioning, and ultimately, project handover. As wind and solar projects stack up, as data centers expand to meet AI-driven demand, and as utilities struggle to modernize their networks, the availability of transformers — ranging from small distribution units to multi-ton substation behemoths — has become the single point of failure across. The world is facing a critical shortage of electrical transformers, a vital component of the power grid that ensures the smooth flow of electricity from generation sources to consumers. While the issue spans the globe, its impact is particularly acute in Ireland, where ambitious renewable energy. A transformer is an electrical instrument made of two or more inductors and is used to transfer energy from one source to another, either increasing or reducing the voltage. Transformers are essential to the energy landscape—from helping grid operators respond flexibly to power fluctuations to. In 2024, Ireland's transformer import market saw a shift towards diversification with prominent suppliers being Italy, China, UK, Spain, and Germany. 9% year-on-year growth since 1997. Our transformers are built with precision to step up or step down voltage, ensuring optimal power distribution for industrial and commercial applications. With advanced technology and.
