

# Utility-scale solar switzerland

- ☑ High energy density and long cycle life
- ☑ Modular structure

- No need to replace the battery
- Shorter charging time
- Meets 99% EV car

## Overview

---

72% of Swiss people have approved a new electricity law to accelerate renewable energy development. New buildings with a construction surface area of more than 300 m<sup>2</sup> must have solar installations on their roofs or facades. The building sector is playing a key role in achieving this goal and in climate protection in general given that Swiss buildings account for about one third of Switzerland's CO<sub>2</sub> emissions and consume approximately 40% of the total energy demand in Switzerland. From pv magazine France About 68. A solar PV installation consists of several solar modules and can be installed anywhere where there is sun, such as on rooftops, façades or in open fields. The more sunlight, the more electricity can be. The International Energy Agency (IEA), founded in 1974, is an autonomous body within the framework of the Organization for Economic Cooperation and Development (OECD). The Market Sizes and Forecasts are Provided in Terms of Installed.
