

Western Europe rooftop solar power generation system

Overview

The REPowerEU rooftop solar initiative is the European Union's strategic response to the continent's energy vulnerability exposed during the 2022 gas crisis. Its central goal?

Achieve over 600 GW of installed solar capacity by 2030, much of it sourced from urban rooftops. The purpose of this update is to evaluate and report on the progress made by Member States in the deployment and facilitation of household rooftop solar PV since the original report published in May 2022. This update seeks to assess the impact of significant policy and regulatory changes in the EU. The bulk of EU solar power comes from building installations, which make up around two-thirds (over 220 GW) of current EU solar capacity. By 2024, this energy source accounted for approximately 11% of the EU's power supply and continues to expand at a rapid pace. “In 2022, the EU made a bold promise: every suitable rooftop in Europe should become a mini power plant. To achieve this swiftly, immediate action is necessary to increase capacity to manufacture photovoltaic panels, improve existing public buildings, and address the remaining challenges in the short-term.

Western Europe rooftop solar power generation system

REPowerEU Rooftop Solar: Europe's Clean Energy Revolution

Discover how REPowerEU is transforming Europe's rooftops into solar power hubs. Learn mandates, funding, and country-level execution plans.

Rooftop Solar: Growth, Grid Limits & Net-Billing

Explore the rise of rooftop solar in the EU, the challenges of grid congestion, and how net-billing policies shape the future of solar energy deployment.

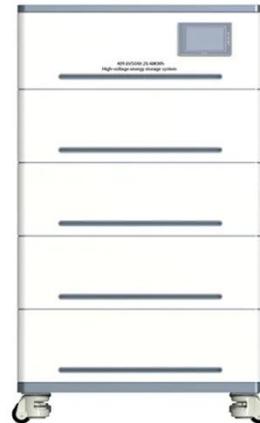

Flexible Buildings, Resilient Grids

Our modelling shows, that by 2030, smart solar building solutions could meet more than half of EU daily energy system flexibility needs, and a third of its annual flexibility needs. That means ...

Rooftop PV takes off in EU - NGO report

Rooftop solar photovoltaic (PV) in the EU is thriving due to new strategies and regulatory changes adopted by the bloc since 2022, in large part because of Russia's war on Ukraine, ...

Rooftop solar could meet 40% of EU's long-term electricity demand

A new EU-wide analysis shows that rooftop solar photovoltaics could supply around 40% of Europe's electricity by 2050. The analysis provides an open access, high resolution basis for more ...

Axpo builds Europe's largest single-span solar roof system

03.02.2026 - Axpo subsidiary Urbasolar has begun construction of Europe's largest single-span rooftop solar system. The system is being built on the 136,000 m² roof of the OMEGA logistics building in ...

European Solar Power: Capacity, New Installations, and Trends

As the peak of the energy crisis fades, government incentives and consumer enthusiasm for rooftop solar systems

have diminished. Major EU markets like Germany and Italy reported ...

Rooftop Solar and Battery Storage for European Homeowners

Perfect for urban families by enabling solar energy generation combined with battery storage, reducing reliance on traditional power sources. Provides backup power during outages, ...

UPDATED: Rooftop Solar PV Country Comparison Report

By examining the progress made and challenges faced, the report aims to provide a comprehensive overview of the current state of residential rooftop solar PV adoption across the EU, offering insights, ...

EU Initiative Solar Rooftop Power Generation

These initiatives will introduce a legally binding EU solar rooftop obligation to ensure accelerated installation of solar

panels on buildings, help create a skilled workforce
