

What is the solar inverter like

Overview

Solar inverters convert your panels' direct current (DC) electricity to alternating current (AC) electricity that your home and appliances use. There are three types of solar inverters: string inverters, power optimizers (used with string inverters), and microinverters.) Most homes use AC rather than DC. At its heart, a solar inverter is a power translator. Think of DC power as raw, untamed energy—powerful but not in a format that your home can use. You might have a fistful of yen, but until you stop and exchange it for USD, you can't pay for lunch stateside. As you may or may not know, solar panels generate electricity in the form of direct current (DC). Note the many large capacitors (blue cylinders), used to buffer the double line frequency ripple arising due to the single-phase AC system.
